MONTADO/DEHESA CHARACTERIZATION

Scenario A Abandonment	Scenario B1 Ungrazed "Montado"	Scenario B2 Grazed Montado	Scenario C Grazing intensification
<p>•<u>Shrubland</u></p> <p>No grazing</p> <p>Abundant shrub vegetation</p> <p>No management</p>	<p>•<u>Montado</u> <i>Cork oak, holm oak, other oaks</i></p> <p>No grazing</p> <p>Shrubland understory</p> <p>Forestry management</p>	<p>•<u>Montado</u> <i>Cork oak, holm oak, other oaks</i></p> <p>Extensive grazing <i>(0.1 to 0.5 LU/ha)</i></p> <p>Grassland understory</p> <p>Agro-forestry management</p>	<p><u>Natural or sown grasslands</u> <i>/ Fodder crops</i></p> <p>Intensive management <i>(over 0.5 LU/ha)</i></p> <p>Farming management</p>

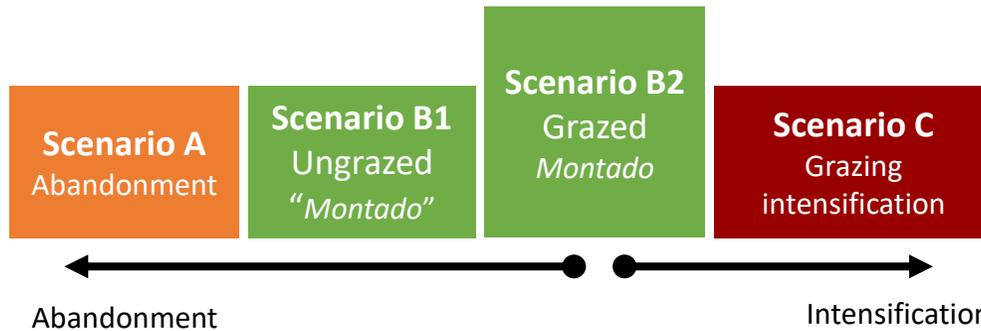

RESULTS FROM A SYSTEMATIC LITERATURE REVIEW

CHANGES IN ECOSYSTEM SERVICE SUPPLY FROM SCENARIO B2:

- Decrease
 ++ Increase
 + Equivalent to B2 (no change)
 ? Contrasting evidence

Blanks = no suficiente data to assess

	A	B1	B2	C
Carbon Sequestration	-	+	+	-
Nutrient cycling	-	?	+	-
Erosion control	-	?	+	-
